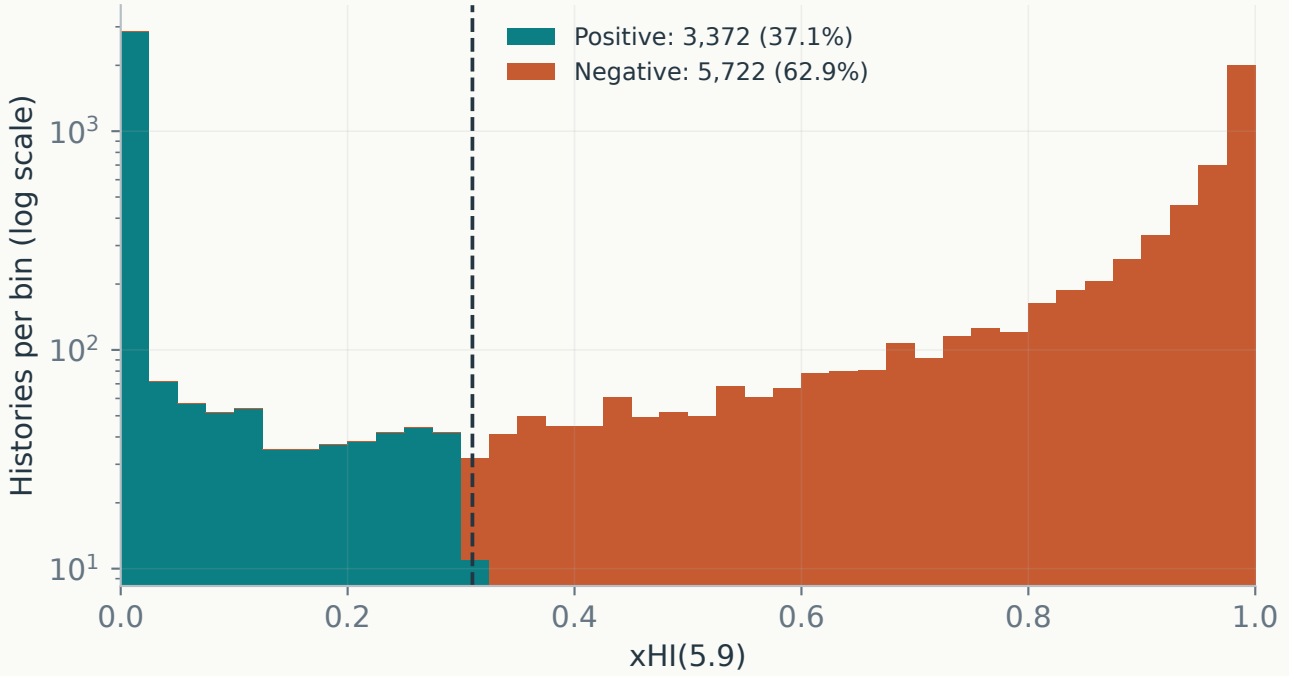
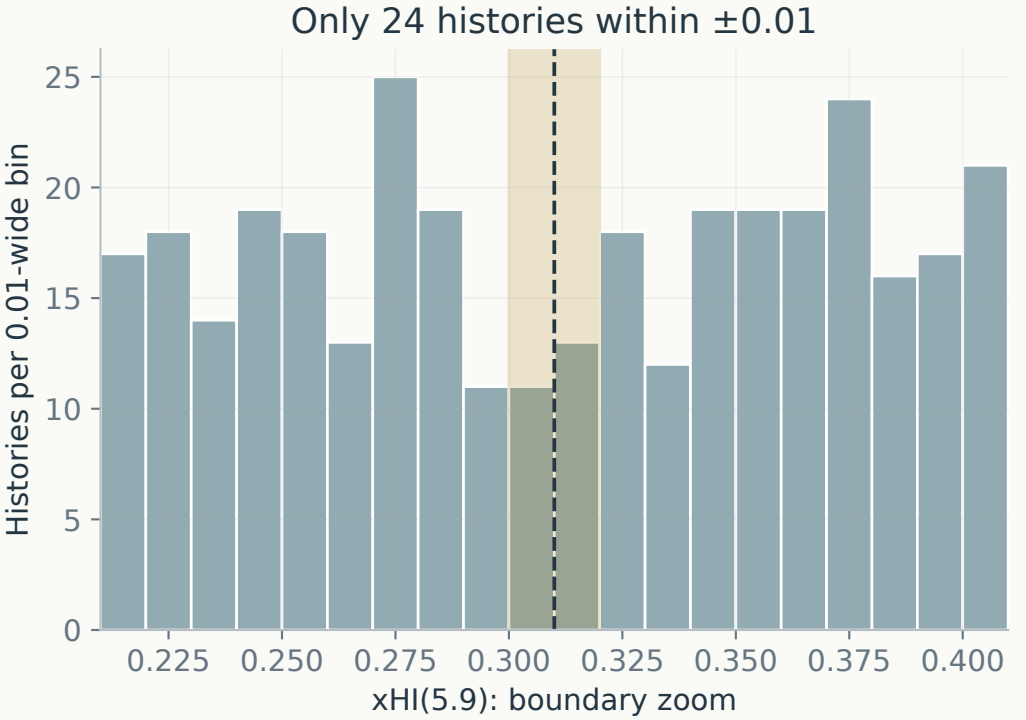
02 | Classifier balance and the boundary

Cut = xHI(5.9) < 0.31, from the frozen original likelihood. Negative histories remain in the dataset.





1,945 / 3,372 positives also have logL_tau ≥ −12.5. This excludes LF and is not posterior acceptance.

Counts are from the mixed training design, not the scientific prior. Cut remains unchanged; no classifier hard gate enabled.
